

## Deploying a reliable, flexible and future-ready data solution for SunPork Group

### Reducing risk and boosting peace-of-mind for a growing, global business

With operations increasing and an office relocation on the horizon, SunPork Group's IT team identified significant risks in operating its core IT Server infrastructure hardware onsite.

The SunPork Group, which creates and stores data from over 53 locations across Australia and New Zealand, recognised the importance of fast, reliable, and uninterrupted access to business information.

By relocating server and data storage hardware to YourDC, SunPork now benefits from ongoing peace of mind and a reliable, flexible platform to support future growth.

## About SunPork Group

SunPork Group is the nation's largest pork producer. Its 47 Australian and 6 New Zealand farms, along with its feedmills, abattoirs and value-add facilities, enables the Group to maximise quality and value through its sustainable farming practices and superior genetics.

## Delivering on a challenge

While the business has continued to grow nationally and around the world, its technology team, led by General Manager for ICT, Iestyn Thomas, identified significant risks in maintaining the Group's core infrastructure within its head offices.

Its growing number of locations were producing higher volumes of commercially critical data, and the team recognised the potential challenges ahead of maintaining an in-house data solution.

Ahead of a relocation to larger premises, Iestyn oversaw a review of the business's current and future ICT needs before going to market to identify a technology partner.

While a cost-benefit analysis demonstrated similar costs when reviewing on and off-site solutions, YourDC's security and performance capability led SunPork to implement a YourDC data centre-based solution.

## A resilient, scalable solution

By relocating its IT hardware to YourDC, SunPork Group benefited from a new level of environment stability and physical security.

YourDC's reliable power and cooling systems have a 100% uptime guarantee, and both its data centre sites offer monitored and secure access paired with high-performance internet.

Further assurance of service reliability to SunPork has come through 24/7 remote hands support provided by YourDC's experienced, highly qualified, and meticulous technicians.

Across the relocation phase, YourDC technicians worked closely with SunPork Group to complete critical work on time, without disruption.

Infinite scalability, world-class physical security and seamless redundancy has equipped SunPork with a robust, cost-effective solution that will help underpin the Group's future growth.

"YourDC's team was very easy to work with, from scoping the requirements, to a thorough validation of the equipment that was to be moved. The provision of a detailed scope of works at a reasonable cost made the whole process very easy.

The attention to detail and the onsite racking of equipment was completed to a very high standard – the project has provided SunPork with a first-class, future-ready data centre solution."

### Real results for SunPork Group

- Peace of mind performance
- Enhanced productivity
- Reliable access to key data
- Future-proofed infrastructure
- Better connectivity
- Enhanced redundancy
- Transformed disaster resilience
